

Investment project

Construction of a pulp dryer with the use of low grade thermal energy

Project implementation is aimed at capacity increase, production and sales of products ramp-up, dried pulp cost reduction due to the complete substitution of primary thermal energy used for drying to the secondary one (*there is no need to use natural gas for drying*)

It is required to attract financial resources in the amount of about 48 mln. roubles for project implementation

This project is recognized as the investment one, because it has no analogous not only in the Republic of Belarus, but also on the territory of the Customs Union (*the establishing production capacity will amount to more than 33000 tons of granulated pulp per year*).
